## Summary

I am a 33-year-old man with 9 years of iOS development experience. I am not afraid when I lose time. I am just afraid when I do not have the will. Persistence is my primary point.

I have a strong skill set to adapt to your requirements for this position because I've worked with Swift for more than 5 years. Before that, I worked with Objective-C and Obj-C++. I also have skills with JS when working directly with a browser application. I can set up an enterprise application from scratch. I am also familiar with many kinds of third libraries or creating/maintaining iOS SDKs.

## Experience
